

This is the Handiest Thing You'll Carry in your Bag!

More and More Modems, Faxes and Credit Card Terminals are being installed Every Day! Most are sharing lines used for other purposes.

It's NOT A BIG DEAL!

As long as you stick one of these in front of EACH DEVICE sharing the line, other devices will get dead air until the line becomes free, and then automatically get dial tone! **Incoming or Outgoing!**

These little Exclusion Adapters are cheap and easy to install. I carry a handfull in my bag all the time!

Two jacks are provided on each adapter, so that if the devices are located next to each other, You Only Need ONE Adapter!

SHARE MODEM & FAX LINES!

Never put two in series... They don't work that way!

Exclusion (Privacy) Adapter Built into Modular Jack:

Modular surface jack mounts on wall and contains TWO modular jacks that exclude each other, and work with all of our other exclusion devices on this page.

Great for Hotels or areas where an adapter might get stolen or damaged.

Includes LEDs indicating which jack is in use. Multiple jacks can be installed on the same line, which would exclude each other (you don't have to use both RJ's on each jack).

NOTE: LEDs do NOT show when line is busy at another location.

Not FCC Registered

New Jack Style

Exclusion (Privacy) Chip (Diode):

Looks like a diode, but it's not! How does it work?

If the voltage in front of the chip is over 24V (-12V for 24V chip), then it conducts. If not, it doesn't conduct and the phone is dead.

Stick it in a jack, or punch it down on a 66 Block with Beans. It's EASY!

Limited Quantity!

NO LONGER MADE!

These prices will be going up as our inventory goes down... **STOCK UP NOW!**
